

Team Name: Cowboys

Team Lead: Gabriel Oniyitan

Team Members: Isaiah Bailey, Moses Ojo, Austin Woodruff, Cade Powell

Project Name: FaceRoll

Course: CSCE 4905.501 - Information Technology Capstone I

1. As a student, I want to log into the system using a project-specific account, so my attendance can be tracked using campus authentication.
2. As an instructor, I want to view attendance records in a dashboard so I can quickly see who is present and absent.
3. As an instructor, I want to manually mark or correct attendance so that errors or special cases can be handled.
4. As a student, I want to enroll my facial data through the application, so that the system can recognize me during the in-class attendance check-ins.
5. As an instructor, I want to start and stop an attendance session for a specific class period, so attendance is only recorded during valid class times.
6. As a student, I want to receive confirmation after a successful attendance scan, so I know my attendance was recorded correctly.
7. As an instructor, I want the system to identify students who arrive late, so that attendance records accurately reflect student arrival times.
8. As an instructor, I want to view attendance in real time during class so that I can immediately see who is present or absent.
9. As an instructor, I want student attendance to be recorded automatically as students enter the classroom, so that I do not have to spend class time taking attendance manually.
10. As a student, I want to scan a QR code displayed by the instructor, so that I can access the attendance or enrollment page without manually entering a URL.
11. As a student, I want to receive feedback when my face scan fails, so that I know whether to retry the scan or contact my instructor.
12. As a student, I want to update my facial data so that the system can continue to recognize me if my appearance changes.
13. As a student, I want to opt out of facial recognition, so my privacy concerns are respected.
14. As an instructor, I want to see which students have opted out of facial recognition, so that I can manage their attendance manually.
15. As an instructor, I want to export attendance records as a CSV or PDF file, so I can maintain records or perform grade calculations outside the system.
16. As a student, I want to view my own attendance history in the system, so that I can track my attendance status throughout the semester.
17. As an instructor, I want to restrict attendance check-ins to a specific location or classroom, so that attendance can only be recorded when students are physically present.
18. As a system administrator, I want to manage user roles and permissions so that students and instructors only have access to features relevant to their role.
